

A 23 y/o primigravida of 29 weeks with no significant past medical history comes to the ED with a headache, fatigue, nausea, and a body "rash." Her BP is 163/96. Her Hb is 93 (low), WBC 8.0, platelets of 85 000 (low), with blood glucose of 6.4 mmol/L. AST and ALT are both elevated at 110 and 98 respectively. Total bilirubin is 34 umol/L (elevated), direct bilirubin is 0.4 umol/L, and lactate dehydrogenase is 576 U/L (nl < 248 U/L). She is afebrile. What is the diagnosis?

- a) HUS
- b) Acute fatty liver of pregnancy (AFLP)
- c) **HELLP syndrome**
- d) TTP
- e) Acute hepatitis
